

Land Access

Managing ongoing access to land is a key imperative for every resource company and is on the critical path to your project's success. From identifying the right stakeholders who have an interest in the land in question, to the accelerating effective outcomes for all stakeholders, Infoscope can manage the multifaceted challenges of accessing land.

STAKEHOLDER ENGAGEMENT

Easy and intuitive stakeholder communication capture is fundamental to enabling a partnership approach to stakeholders over the life of a project. Infoscope builds on this key functionality and delivers contacts, organisations, communications and issues management. With simple and transparent reporting on engagement effectiveness, your stakeholders can become true partners in your success.

STAKEHOLDER AGREEMENTS

Agreements administration can be challenging and can escalate disruptions which impact your operations. Infoscope can effectively manage your landholder agreements by linking multiple interested parties and their varied interests through its innovative graph relationship engine. Infoscope then drives your obligations through its highly configurable notifications and workflow system to deliver on your obligations and compliance.

ENTRY NOTICES

The sensitivities of accessing land at the agreed times and through the agreed methods need to be systemised to avoid mismanagement. Infoscope can record and manage your entry notices and establish the associated protocols and link them to key stakeholders to present a holistic picture. Based

on your recorded entry notices, Infoscope delivers a spatial paradigm to comply with the expectations of the when and how, when it comes to entering property.

COMPENSATION

Compensation plans are usually complex and vary across the spectrum of your stakeholders. Agreed outcomes need robust delivery. Infoscope can help establish and record both monetary and in-kind compensations for ongoing access, incident management or one-off actions. Organised engagement with your stakeholders delivered through the Infoscope solution will offer the strong bond between compensation and value. Infoscope is integrated with your financial system for tracking and reporting of payments.

PART OF THE BIG PICTURE

Land access is never a siloed operation, but today's systems are just that – information silos. As a land access professional, using Infoscope can provide you with the right level of insight into your overarching engagement through visibility on tenement functions, environmental sustainability plans, and community and heritage related activities.
