

Tenement Management

Whatever the name – mineral leases, permits or titles – tenements are your key land asset and managing them is a business-critical activity for every resource company. Infoscope delivers the full life-cycle management of tenements right from applications, through ongoing reporting and compliance, to surrender.

FINANCIAL FORECASTING AND EXPENDITURE REPORTING

Infoscope is integrated with your financial and accounting systems to provide timely insights on your tenements and their risk around financial compliance. There will be increased granularity in statutory financial reporting on tenements and the complex computation necessary at various stages such as exploration, operations and maintenance. Infoscope also integrates with your drilling databases and provides a seamless interface, triggers actions and produces reports.

LIFECYCLE TRANSITIONS

Tenement life cycle begins even before its official grant and could have trailing obligations past the operating life of a mine, and managing these complexities can deliver enormous upside to your operations. Infoscope starts delivering efficiencies right from the monitoring of interested land, progression of tenement applications and then the complete set of ongoing actions to keep on top of your compliance and reporting with workflows, tasks and watches.

MONITORING TENEMENT ACTIVITY

Securing tenements is a competitive advantage in today's environment with the increased access to government datasets and statutory compliance

information. Infoscope provides an early mover advantage by managing and monitoring the published public data from both geospatial and transactional databases to provide early notifications of upcoming availability of land.

TENEMENT OBJECTIONS AND OBLIGATIONS

Managing the competing interests in your tenements and the management of conditions imposed by the regulator needs proactive management. Infoscope provides early intervention processes that flag potential conflicts showing the spatial footprint of the related parties allowing the tenements team to work out the best outcomes. Infoscope provides a full Conditions and Obligations monitoring system that integrates with your corporate risk and compliance registries to mitigate operational risks.

PART OF THE BIG PICTURE

As a tenement manager, you hold the key land asset that the business value rests on, and timely and accurate decision making is based not just on pure tenement information, but the juxtaposition of the environmental impacts, geology activities and financial data. Infoscope is the only solution that can connect and provide that control.
