K2fly Tailings Management

An Integrated Surveillance & Compliance Solution

Improve compliance and provide visibility to reduce risks and manage your obligations. Implement safety through our advanced platform and integrations.

One Central View

Centralise data from various sources into one location enabling you to safeguard potential failures.

Showcase your Compliance

Designed to adhere to industry best practice and compliance requirements.

Disclose Data

Collect, manage and disclose tailings data in real-time with confidence, governance and accuracy for requests from industry groups.

Our monitoring solution enables your company to align and comply with the Global Industry Standard on Tailings Management (GISTM).
k2fly

K2fly Tailings Management brings so many components of tailings and environmental management in one central location.

Solution Features

Monitor land subsidence and movement utilising **remote sensing** such as satellite derived InSAR datasets

View **real-time data and receive alerts** related to TSF monitoring of pore pressure, deformation, water levels and vibrations through multiple devices

Visualise facilities across multiple sites in a single screen on a geospatial map

Effectively monitor your facilities with our **spatial data** such as InSAR, DEM and more

Maintain and track environmental monitoring **compliance limits** and be alerted to any exceedances

Action and task delegation for data collection with reminder and escalation notifications
