

# Mine Technical Assurance

Ore Blocking. Mine Geology Data.

Our Mine Technical Assurance solutions drive towards 'net positive impact' in ESG compliance and disclosure to increase ore recovery and improve resourcing.

## Increase Profitability

Produce more high-grade ore by assessing different ore block out scenarios. Automate otherwise manual processes to increase ore recovery by as much as 5-10% which can represent tens of millions per mine.

## Faster Results

Visualise multiple blasts and scenarios in 3D at any one time to quickly assess differences and make informed decisions in line with your mine plan faster than a geologist can block out a single blast.

## Built by Geologists

Our geologist experts have over 30 years' experience and have worked for the biggest mining companies in the world. We have built this experience and expertise in an easy-to-use cloud solution.

**k2fly**

K2fly Limited is an ASX listed technology provider of enterprise-level Resource Governance solutions to asset intensive and extractive industries.

## **K2fly Ore Blocker**

*Automate. Assess. Recover.*

Improve data governance over your resource and reserve data including meshes, wireframes, triangulations and models.

## **K2fly Mine Geology**

*Data Management. Governance. Sampling.*

Capture spatial and temporal data from block models, mine production and process plant. Enhance operational performance by presenting comparisons in customisable ways for analysis of planning.
